

INDECT CAN PROVIDE A COMPLETELY UNIQUE OPTION FOR OUTDOOR DETECTION USING OUR **OUTDOOR CAMERA DETECTION SYSTEM.**

The system has two modes of operation.

In the first mode, the system will count open and occupied spaces and sends the counts to the INDECT system.

The unique ability of the INDECT outdoor camera system is the ability for the camera to zoom in and capture the license plate of the cars that are parked in these areas. This is a dramatic enhancement to the camera based PGS concept. This allows find my car for rooftop and outdoor parking areas. It also allows for complete License Plate Inventory to be created by the system for all parking areas, not just those undercover.

The camera can also provide enhanced security for the parking area by recording and storing video for review in case of an incident in the parking lot.
