## PREMIUM PARKING

### UPSOLUT

PREMIUM PARKING AREAS CAN BE CREATED IN THE PARKING GARAGE USING THE UPSOLUT SYSTEM. ↗

There is no need for extra equipment, such as gates and ticket machines, in the Premium Parking areas. This is enabled through an interface to your revenue control system.

When your customer pays for their parking at the payment machines, the revenue control system asks INDECT where the car is parked. INDECT sends this information to the revenue control system. If the customer is parked in the premium area, the revenue control system applies the higher rate to the ticket. Maximize your revenue and provide a tailored parking solution to your customers.

The INDECT system can also signal the current occupancy to the PARCS to enable demand based parking rates. As the garage fills the rates increase. INDECT sends a signal to the PARCS as each occupancy step is reached. This can dramatically increase revenue.

This interface is also used to allow customers to see the location of their car when they insert their ticket into the payment machines. INDECT will send the vehicle location to the PARCS allowing the information to be displayed in the screen or to be printed on the ticket.

These abilities are dependent on the PARCS system being able to display this information or change rates based on vehicle location. Please consult your PARCS supplier for details.
