

River Oaks District Parking Provides Green Parking Amenity

The 1,300-space parking garage provides convenient parking to patrons of River Oaks District, a high-end retail destination in Houston. The district is a widely recognized mixed-use development offering luxury retail, restaurants and entertainment, along with residential units.

The garage utilizes an INDECT parking guidance system to monitor spaces and direct patrons to available parking. The system features a combination of ultrasonic sensors and UPSOLUT camera sensors, as well as a kiosk to help patrons find their vehicles if they've forgotten where they parked.

Parking Guidance Makes Parking Greener

By guiding parkers directly to open spaces,

the River Oaks District parking guidance system minimizes the amount of time spent searching

for parking, reducing the amount of unnecessary fuel wasted by patrons' vehicles. Parking guidance can help drivers find spaces up to 45 percent faster.

The system also dramatically decreases the amount of vehicle exhaust emitted in the structure. As a result, in addition to promoting sustainability, the system also provides a healthier parking environment for staff and patrons. ■
