

VIDEO STREAMS

UPSOLUT

INDECT OFFERS **RECORDED VIDEO** AS A STANDARD FEATURE. 

The video is 1.2MP and better than HD quality (1290x972). The default setting is B&W video to maximize stream length and to reduce the storage size of the files. Color is optional. The streams are up to 100 seconds long.

Photo 1

The system uses motion detection to record “streams” of video from the sensors. For example, when a car enters a space we can record a video of that. This will allow you to capture key moments where cars may bump each other whilst parking.

Photo 2

The stored video streams can be connected to events in the parking space. This is useful when using the sensors for enforcement purposes. For example, you can record when a vehicle entered and exited a space and use this as evidence for overstay enforcement in time-controlled areas.

See the options section for the ability to provide 100% video coverage of your garage using INDECT’s Upsolut system.

As seen in Photo 2, the footage is clear, even in the low light of a garage after hours.
