SURVEILLANCE CAMERA

UPSOLUT

INDECT OFFERS **FILM CLIPS** AS A STANDARD FEATURE TO THE SYSTEM. 

However, the view of PGS sensor cameras is limited because they are focused on the car locations. This means that only approximately 30% of the garage is being observed by a PGS camera sensor.

INDECT has solved that issue with a unique add on camera module for the sensors.

For customers that want 100% video coverage we offer a cost effective add on fish eye camera under the sensor. The fish eye camera captures 5mp HD color streaming video of your parking garage. The resolution is up to QXSGA (2592x1944) quality and streams at up to 25 frames per second. The video includes digital PTZ ,so you can zoom in and capture license plates or the faces or people of interest, and also motion detection.

Rather than have security video on two systems, which requires extra training and access, we designed the system to provide the video is in an industry standard format. The video can be streamed directly into your existing video security solution.

The camera can be ordered with any sensor. They could be installed on selected sensors to monitor busy pedestrian areas and intersections or on every second sensor to provide foot coverage of the garage.
