**DEFENDANT SAN DIEGO
COUNTY REGIONAL AIRPORT
AUTHORITY'S NOTICE OF
MOTION AND MOTION TO
DISMISS AMENDED
COMPLAINT UNDER
35 U.S.C. § 101**

Date: December 10, 2018

Time: 10:30 a.m.

Ctrm: 5A

Judge: Hon. Roger T. Benitez

Demand for Jury Trial

NOTICE OF MOTION AND MOTION

TO THE COURT, ALL PARTIES, AND THEIR RESPECTIVE COUNSEL
OF RECORD: PLEASE TAKE NOTICE that on December 10, 2018, at 10:30 a.m.
or as soon thereafter as the matter may be heard in Courtroom 5A, before the
Honorable Roger T. Benitez, SAN DIEGO COUNTY REGIONAL AIRPORT
AUTHORITY will and hereby does move the Court to dismiss Park Assist LLC's
Amended Complaint with prejudice.

As set forth in the accompanying Memorandum of Points and Authorities,
the claims of the patent-in-suit are directed to subject matter that is ineligible for
patenting under 35 U.S.C. § 101 and contain no elements that transform them into
patentable subject matter. The Court should invalidate those claims and dismiss the
Amended Complaint with prejudice.

This Motion is based on this Notice, the Memorandum of Points and
Authorities and materials filed herewith, and all records, pleadings and files herein,
and any other matters that the Court deems appropriate.

Dated: November 8, 2018

1 Park Assist, LLC alleges infringement of U.S. Patent No. 9,594,956 (the
2 “’956 patent”), which is directed to gathering, analyzing, and transmitting
3 information about occupancy status and permits in a parking lot. But, under well-
4 established Supreme Court and Federal Circuit law, claims directed to the abstract
5 idea of processing information are not eligible for patenting under 35 U.S.C. § 101,
6 and the ’956 patent claims lack any transformative element that creates patentable
7 subject matter. The Court should invalidate the claims of the ’956 patent and
8 dismiss the Amended Complaint with prejudice.

9 I. INTRODUCTION

10 For more than 150 years, courts have recognized that abstract ideas fall
11 within a judicial exception to § 101 of the Patent Act and cannot be patented.
12 Within the last decade, a series of Supreme Court decisions—*Bilski*, *Mayo*, and
13 *Alice*—radically changed the application of this exception. No longer can patentees
14 obtain claims directed to abstract ideas, like the analysis of information, simply by
15 reciting generic machines or computers in their claims.

16 The ’956 patent is a prime example of unpatentable subject matter under this
17 Supreme Court authority: claims that use generic computer components to carry
18 out the gathering, storage, analysis, and transfer of information. In this case, the
19 information is used for the mundane tasks of determining whether there is a car in a
20 parking space, whether the space is properly designated as occupied, and whether
21 that car has a permit for that space—which humans have done in their minds, and
22 with pen and paper, for years. The ’956 patent is also a prime example of a
23 patentee attempting to use the “draftsman’s art” of reciting computer processing to
24 circumvent the requirements of § 101. While Park Assist, LLC (“Park Assist”)
25 successfully used this drafting technique to escape § 101 rejections during
26 prosecution of its patent, the Supreme Court’s *Alice* decision, and numerous
27 Federal Circuit decisions since then, expressly condemn Park Assist’s strategy.
28 The Court should apply this established law and rule that the claims of the ’956

1 patent are ineligible under § 101.

2 **II. BACKGROUND**

3 **A. The Parties**

4 This motion should be resolved based on the pleadings and materials
5 incorporated therein. *See Aatrix Software, Inc. v. Green Shades Software, Inc.*, 882
6 F.3d 1121, 1125 (Fed. Cir. 2018). The San Diego County Regional Airport
7 Authority (“SDCRAA”) provides this brief background of the parties solely to
8 furnish context for the Court.

9 **1. The San Diego County Regional Airport Authority**

10 SDCRAA is an independent agency that was created in 2003 to operate the
11 San Diego International Airport, plan for the future air transportation needs of the
12 region, and serve as the region’s Airport Land Use Commission. Following the
13 extensive renovation of Terminal 2, SDCRAA requested bids for the construction
14 of a roughly 2,900-space parking plaza adjacent to Terminal 2. This project was
15 completed in stages beginning in approximately May 2018. SDCRAA did not
16 directly manage the construction of the Terminal 2 parking plaza, nor did it directly
17 select the vendors, subcontractors, or parking systems for the plaza.

18 Among other technology systems in the Terminal 2 parking plaza is an
19 INDECT parking guidance system that provides counts of available spots in various
20 sections of the parking plaza and also provides LED indicators over groups of spots
21 to alert drivers to available parking spaces. The INDECT parking guidance system
22 in the parking plaza works autonomously, without user/operator review of parking
23 space occupancy. The INDECT parking guidance system in the parking plaza has
24 no interaction with vehicle permits, nor are there currently any permit- or preferred
25 parking-based parking spaces in the parking plaza. SDCRAA does not operate the
26 parking plaza or the INDECT parking guidance system. (*See* ECF No. 1 ¶ 17 (“On
27 information and belief, SDCRAA has contracted and entered into an agreement
28 with Ace Parking to operate the Airport Parking System.”).)

1 **2. Ace Parking Management, Inc.**

2 Ace Parking Management, Inc. (“Ace”) is a vendor for SDCRAA. Ace
3 provides management and operations services for all SDCRAA-owned parking lots
4 at the San Diego International Airport, including the Terminal 2 parking plaza. Ace
5 has no access to the INDECT parking guidance system, no way to view images
6 captured by the system, and no regular interaction with the system.

7 **3. Park Assist, LLC**

8 Park Assist, a subsidiary of the Dutch corporation TKH Group NV (ECF No.
9 3), sells parking guidance systems. Park Assist submitted a bid for the installation
10 of its parking system to the Terminal 2 parking plaza general contractor, but lost the
11 contract to the INDECT parking system. (*See* ECF No. 23 ¶ 32.)

12 **B. The ’956 Patent**

13 The ’956 patent issued on March 14, 2017, based on a PCT application filed
14 on May 8, 2011. (ECF No. 23-1.) It is entitled “Method and System for Managing
15 a Parking Lot Based on Intelligent Imaging.” (*Id.*) The patent’s abstract provides
16 the following description of the invention:

17 To manage a plurality of parking spaces, one or more
18 images are acquired, with each parking space appearing
19 in at least one image. Periodically acquired images of
20 occupancy and identity are used in directing a customer
21 to a parked vehicle. Periodically acquired images of just
22 occupancy are used in controlling respective
23 environmental aspects, such as illumination and
24 ventilation, of the parking spaces. For these purposes, the
25 images are classified automatically as “vacant” or
“occupied”, and are displayed along with their
classifications so that the classifications can be corrected
manually. (*Id.*)

26 The issued claims of the ’956 patent, however, have nothing to do with
27 “directing a customer to a parked vehicle” or “controlling respective environmental
28 aspects” of parking spaces as recited in the Abstract. (*Id.* at Claims 1-2.) The

claims relate only to ensuring the occupancy indicator (a multicolor light) for a parking spot is accurate and that vehicles have the required permit to park in specified spots.

1. The Claims of the '956 Patent

The '956 patent has just two claims: independent claim 1 and dependent claim 2. Independent claim 1 requires the following:

1. A method of managing a plurality of parking spaces, comprising:
 - (a) monitoring a parking space with an imaging device of an imaging unit;
 - (b) detecting, by said imaging unit, occupancy of said parking space;
 - (c) assigning said parking space, in which said occupancy was detected, an occupied status, wherein said occupied status is indicated by illuminating a first color of a multicolor indicator collocated with said imaging device, said first color predefined to determine said occupied status;
 - (d) obtaining, as a result of said parking space having said occupied status, a single high resolution image of a vehicle occupying said parking space, said high resolution image obtained by said imaging device;
 - (e) storing at least part of said high resolution image on a storage device;
 - (f) displaying a thumbnail image of said parking space on a graphic user interface (GUI), said thumbnail image digitally processed from an image electronically communicated to said GUI from said imaging unit;
 - (g) deciding whether said occupied status is incorrect, based on a visual review of said thumbnail image on said GUI;
 - (h) correcting said occupied status, by inputting computer-readable instructions to a computer terminal of said GUI, if said parking space shown in said thumbnail image is vacant and said computer terminal electronically communicating a command to toggle said multicolor indicator to illuminate a second color, said second color predefined to indicate a vacant status;

(i) extracting from said high resolution image, by digital image processing, a permit identifier for said vehicle and comparing said permit identifier with at least one parking permit identification stored on said storage to determine a permit status of said parked vehicle; and
 (j) initiating an infringement process for said vehicle having said permit identifier that fails to coincide with at least one of said at least one parking permit identification. (*Id.* at Claim 1.)

Steps (a) through (h) of claim 1 cover determining whether a vehicle is present in a parking space, then having a human operator determine whether the occupancy indicator light for the parking space is accurate (and correcting it if the space is vacant). Steps (i) and (j) cover determining whether a car parked in a parking space has the required permit (and initiating an “infringement process” if not).

Claim 2 depends from claim 1 and narrows it by requiring the use of a self-modifying classification algorithm:

2. The method of claim 1, wherein said detecting includes providing machine-readable code of a self-modifying classification algorithm for assigning said respective statuses, the method further comprising:
 (e) said system executing said machine-readable code to modify said classification algorithm in response to said correcting. (*Id.* at Claim 2.)

Claim 2 thus covers modifying the occupied status algorithm if an error had to be corrected in step (h) of claim 1.

2. The '956 Patent Specification

The '956 patent specification provides further context on the nature of the claimed invention. As the specification acknowledges, “[t]he use of different sensor technologies [in a parking lot], such as ultrasonics or image processing is known.” (ECF No. 23-1 at col. 1:14-16.) Such known image processing “may determine occupancy of slots and provide the driver with guidance to available spaces either upon entry to the parking lot or by displays strategically located

1 within the lot.” (*Id.* at col. 1:16-23.)

2 The inventors identify a number of supposed shortcomings in these existing
3 sensing and guidance methods, with objectives for improving on the existing
4 methods with their invention. (*Id.* at col. 1:22-44, 2:1-26.) But nearly all of these
5 objectives relate to claims that the inventors abandoned in prosecution, not the two
6 claims that ultimately issued. For example, the inventors claim that their invention
7 is directed toward providing “customers guidance in finding their car,” “reduc[ing]
8 parking lot energy consumption” and “administer[ing] targeted advertising and
9 loyalty programs through vehicle identification.” (ECF No. 23-1 at col. 2:3-26.)
10 But nothing in the claims that actually issued pertains to these purported
11 advantages. At best, the issued claims relate to using generic computers for
12 “improv[ing] enforcement of parking lot rules and regulations” and “provid[ing] a
13 platform for real-time remote monitoring and human control of the parking
14 system.” (*Id.* at col. 2:15-26; *see also id.* at Claims 1-2.)

15 The specification makes clear that the claimed methods can be practiced on
16 general computers and hardware, such as a “desktop or server grade computer,” “an
17 energy efficient multicolor LED indicator,” “CMOS digital camera technology,”
18 and a “400 MHz ARM9 processor [], available from ARM Ltd. of Cambridge GB.”
19 (*Id.* at col. 7:49-66, 8:30-39, 8:60-63.) Similarly, the ’956 patent specification
20 explains that the claimed vehicle detection can be practiced with existing computer
21 algorithms: “Any classification routine or machine learning algorithm can be used;
22 some common algorithms in the literature include Classification and Regression
23 Trees, Support Vector Machines, and Artificial Neural Networks.” (*Id.* at col.
24 11:61-65.) Additionally, “the metrics that are computed can themselves be learned
25 from training data, using a variety of methods known in the art such as Kernel
26 Methods, Principal Components Analysis, Independent Component Analysis,
27 Feature Detection Methods, etc.” (*Id.* at col. 11:66-12:4.)
28

3. The Prosecution of the '956 Patent

During prosecution of the '956 patent, the examiner correctly identified subject matter eligibility problems with the pending claims.¹ In May 2015, the examiner issued a rejection of pending claims 19 and 20 (which, following amendment, became issued claims 1 and 2), as ineligible under § 101, along with many other pending claims. (Declaration of Eric M. Acker ("Acker Decl."), filed herewith, Ex. 1 at 3 (5/1/15 Office Action).) The examiner noted that these claims were directed to the abstract idea of "organizing human activities including the mere instructions for a human to implement the claimed idea on a computer," and the additional claim elements did not provide more "meaningful limitations." (*Id.*) In response to this rejection, Park Assist *did not* dispute that the claims were drawn to an abstract idea, but claimed that "[i]t appears that a clerical error has occurred" because the rejected claims "include, at the very least, images captured by an imaging device – *thereby tying the invention to a machine.*" (*Id.* at 7 (8/3/15 Resp. to Office Action) (emphasis added).) In response to Park Assist's "clerical error" argument, the examiner withdrew her § 101 rejection without comment.

But six months later the examiner again rejected claims 19 and 20 as ineligible under § 101, along with many other pending claims. (*Id.* at 12 (2/9/16 Office Action).) As the examiner recognized, those claims were "directed to comparing and organizing information . . . for transmission," which is an abstract idea that is ineligible for patenting. (*Id.*) The examiner also recognized that the claims' recitation of "obtaining images," and "determining occupancy based on images," "changing and correcting statuses" did not add the "significantly more"

¹ A court may take judicial notice of a patent's prosecution history in the context of a motion to dismiss under § 101. *Genetic Techs. Ltd. v. Bristol-Myers Squibb Co.*, 72 F. Supp. 3d 521, 526 (D. Del. 2014), *aff'd sub nom. Genetic Techs. Ltd. v. Merial L.L.C.*, 818 F.3d 1369 (Fed. Cir. 2016). Here, SDCRAA discusses the prosecution history not as evidence to support its motion to dismiss, but rather to help the Court understand why Park Assist's prior arguments were legally wrong.

1 necessary to transform an abstract idea into patentable subject matter. (*Id.* at 13.)

2 In response to this § 101 rejection, Park Assist again *did not* dispute that the
3 claims were drawn to an abstract idea. (*See id.* at 21 (5/9/16 Resp. to Office
4 Action).) Instead, Park Assist tried to draft around the § 101 defects. Specifically,
5 Park Assist added the “multicolor indicator” clauses to limitations (c) and (h) and
6 argued that “[t]he claims, as amended now recite at least a processor or controller
7 for controlling the illumination of multicolor indicator [sic], and thus, *tying a*
8 *machine* to a process recitation.” (*Id.* at 17-18, 21.) Park Assist also added the
9 parking permit limitations (i) and (j). (*Id.* at 17.) In sum, Park Assist argued that
10 their amended claims satisfied § 101 because they were tied “to machines and
11 processes that can only be performed by computerized systems.” (*Id.* at 17, 21.)

12 Without further analysis, the examiner accepted these arguments in an office
13 action that also allowed only claims 19 and 20 (now claims 1 and 2) to issue “if
14 rewritten in independent form including all of the limitations of the base claim.”²
15 (*Id.* at 29, 32 (6/9/16 Office Action).) As discussed below, the examiner simply
16 misapplied the evolving law on eligible subject matter, which expressly rejects Park
17 Assist’s arguments to the examiner. The examiner should not have allowed claims
18 1 and 2 to issue, and the Court should now correct that oversight.

19 **III. LEGAL STANDARD**

20 **A. Patent Eligibility Under § 101**

21 The Supreme Court has adopted a two-step framework for determining
22 whether a claim is patent-ineligible under § 101: (1) whether the claims are directed
23 to one of the three patent-ineligible categories, *i.e.*, laws of nature, natural
24 phenomena, or an abstract idea; and (2) whether any claim elements provide an
25 “inventive concept” that transforms the claim into patent-eligible subject matter.

26
27 ² As claim 19 was already written in independent form, the examiner
28 evidently misread the claim or made an administrative error.

1 *Alice Corp. Pty. Ltd. v. CLS Bank Int'l*, 134 S. Ct. 2347, 2355 (2014); *see also*
 2 *Open Parking, LLC v. ParkMe, Inc.*, No. 2:15-cv-976, 2016 U.S. Dist. LEXIS
 3 85260, at *4 (W.D. Pa. Jun. 30, 2016), *aff'd*, 683 F. App'x 932 (Fed. Cir. 2017)
 4 (claim to parking system for communicating space occupancy information to
 5 mobile device failed both steps of *Alice*).

6 The first step in *Alice* looks at the “focus” of the claims and their “character
 7 as a whole” to determine whether the claims are directed to an abstract idea. *Elec.*
 8 *Power Grp., LLC v. Alstom S.A.*, 830 F.3d 1350, 1353 (Fed. Cir. 2016). Claims
 9 reciting a “result or effect that itself is the abstract idea and merely invoke generic
 10 processes and machinery” do not pass muster under *Alice* step one. *Apple, Inc. v.*
 11 *Ameranth, Inc.*, 842 F.3d 1229, 1241 (Fed. Cir. 2016) (citation omitted).
 12 Processing information is a typical example of an abstract idea. *Elec. Power Grp*
 13 830 F.3d at 1353 (collecting cases). Methods of organizing human activity also are
 14 typically abstract, so courts may consider if the claimed invention is analogous to
 15 activities performed by humans. *Intellectual Ventures I LLC v. Symantec Corp.*,
 16 838 F.3d 1307, 1317-18 (Fed. Cir. 2016) (email method claim akin to corporate
 17 mailroom).

18 The second step in *Alice* considers “the elements of each claim both
 19 individually and ‘as an ordered combination’ to determine whether the additional
 20 elements ‘transform the nature of the claim’ into a patent-eligible application.”
 21 *BSG Tech. LLC v. Buyseasons, Inc.*, 899 F.3d 1281, 1289-90 (Fed. Cir. 2018)
 22 (quoting *Alice*, 134 S. Ct. at 2355). “These transformative elements must supply an
 23 ‘inventive concept’ that ensures the patent amounts to ‘significantly more than a
 24 patent upon the [ineligible concept] itself.’” *Id.* (quoting *Mayo Collaborative*
 25 *Servs. v. Prometheus Labs., Inc.*, 566 U.S. 66, 72-73 (2012)). A claim cannot pass
 26 *Alice* step two simply by tying the practice of an abstract idea to a machine or
 27 computer. *DDR Holdings LLC v. Hotels.com*, 773 F.3d 1245, 1256 (Fed. Cir.
 28 2014) (citing *Mayo*, 566 U.S. at 85; *Alice*, 134 S. Ct. at 2358). As the Supreme

1 Court made clear, “the mere recitation of a generic computer cannot transform a
2 patent-ineligible abstract idea into a patent-eligible invention.” *Alice*, 134 S. Ct. at
3 2358.

4 **B. Patent Eligibility Under § 101 Routinely Is Determined at** 5 **the Pleadings Stage**

6 Patent eligibility can be determined at the Rule 12(b)(6) stage “when there
7 are no factual allegations that, taken as true, prevent resolving the eligibility
8 question as a matter of law.” *Aatrix Software*, 882 F.3d at 1125. The Federal
9 Circuit has “repeatedly affirmed § 101 rejections at the motion to dismiss stage,
10 before claim construction or significant discovery has commenced.” *Cleveland*
11 *Clinic Found. v. True Health Diagnostics LLC*, 859 F.3d 1352, 1360 (Fed. Cir.
12 2017); *Aatrix Software, Inc. v. Green Shades Software, Inc.*, 890 F.3d 1354, 1358
13 (Fed. Cir. 2018) (“[S]ince *Berkheimer* and *Aatrix*, we have continued to uphold
14 decisions concluding that claims were not patent eligible at these stages.”)
15 (concurrence in denial of rehearing *en banc*). Early resolution of the § 101 issue
16 can “spare both litigants and courts years of needless litigation.” *I/P Engine, Inc. v.*
17 *AOL Inc.*, 576 F. App’x 982, 996 (Fed. Cir. 2014) (Mayer, J., concurring).

18 Claim construction is not necessary if the “basic character of the claimed
19 subject matter” can be understood without construing the claims or if the outcome
20 of a § 101 motion would be the same “under any reasonable construction.”
21 *Bancorp Servs., L.L.C. v. Sun Life Assurance Co. of Canada (U.S.)*, 687 F.3d 1266,
22 1273-74 (Fed. Cir. 2012); *CMG Fin. Servs., Inc. v. Pac. Tr. Bank, F.S.B.*, 50 F.
23 Supp. 3d 1306, 1314 (C.D. Cal. 2014), *aff’d*, 616 F. App’x 420 (Fed. Cir. 2015).
24 For example, the Supreme Court held the claims in *Bilski* patent ineligible without
25 any claim construction. *See Bilski v. Kappos*, 561 U.S. 593, 599, 612 (2010).

26 **IV. THE CLAIMS OF THE ’956 PATENT ARE INELIGIBLE** 27 **UNDER § 101**

28 The ’956 patent claims are archetypes of claims rejected by courts since
Alice. In fact, as discussed below, just last year the Federal Circuit summarily

1 affirmed the rejection of remarkably similar claims drawn to using computers to
2 monitor and transmit information about the availability of spaces in a parking lot.

3 Here, claim 1 is directed to processing information about parking space
4 occupancy and vehicle permit status, which human beings have performed for
5 decades. While claim 1 must be performed on computer systems, it does not
6 improve the functionality of those systems themselves. These computer systems
7 and generic hardware do nothing to add an inventive concept that transforms
8 claim 1 into patentable subject matter, as they are merely physical components that
9 behave exactly as expected according to their ordinary use.

10 Claim 2 adds only the modification of a classification algorithm in response
11 to user input. In other words, it claims using generic computer code to modify the
12 occupied status detection algorithm in response to user input in step (h) of claim 1.
13 As claim 2 does not teach “significantly more” than running a process on a
14 computer, it lacks the inventive concept necessary to transform its abstract subject
15 matter.

16 **A. Claim 1 of the '956 Patent Is Ineligible Under § 101**

17 **1. Claim 1 is Directed to an Abstract Idea**

18 Claim 1 fails *Alice* step one. It is directed to the abstract concept of
19 processing information, namely information derived from images of parking spaces.
20 Claim 1 implements this processing by using the human mind and generic computer
21 systems—ways of analyzing information that the Supreme Court and Federal
22 Circuit have repeatedly found abstract. And, while claim 1 is set against the
23 backdrop of general computer hardware, nothing in the claim is directed to
24 improving that hardware as such.³

25 ³ Construing the claims of the '956 patent is unnecessary to decide the issues
26 below. No reasonable construction of the claims would alter the fact that the claims
27 are directed to the processing of information, and no reasonable construction of the
28 claims would be dispositive on whether the claims contain an inventive concept.
See Bancorp Servs., 687 F.3d at 1273-74; *CMG Fin. Servs.*, 50 F. Supp. 3d at 1314;
see also Open Parking 2016 U.S. Dist. LEXIS 85260, at *13.

a. Claim 1 is directed to the abstract idea of processing information

Claim 1 is directed to the abstract idea of processing information by collecting, storing, analyzing, and transmitting that information. “Information as such is an intangible.” *Elec. Power Grp.*, 830 F.3d at 1353. Thus, processing information, including by collecting, storing, analyzing, and transmitting it, is an abstract concept. *See id.*; *In re TLI Commc’ns LLC Patent Litig.*, 823 F.3d 607, 611-13 (Fed. Cir. 2016) (invalidating claim to method for recording and classifying digital images with telephone unit); *Content Aggregation Sols. LLC v. Blu Prods.*, No. 3:16-cv-00527-BEN-KSC, 2016 U.S. Dist. LEXIS 166122, at *17 (S.D. Cal. Nov. 29, 2016) (invalidating claim to receiving and transmitting data on handheld device). Park Assist cannot circumvent the exclusion of abstract ideas by narrowing the invention to managing a parking lot, as “a variation on the abstract idea does not mean it is not directed to that abstract idea.” *Advanced Auctions LLC v. Ebay, Inc.*, No. 13-cv-1612-BEN-JLB, 2015 U.S. Dist. LEXIS 39588, at *6 (S.D. Cal. Mar. 26, 2015) (invalidating claim to Internet auctions).

The Federal Circuit recently affirmed that an invention incredibly similar to the ’956 patent is abstract and unpatentable. In *Open Parking, LLC v. ParkMe, Inc.*, the patents at issue claimed a parking system for communicating a real time representation of parking lot occupancy to a mobile device, as well as communicating changes to the occupancy status of individual spaces. 2016 U.S. Dist. LEXIS 85260, at *4. The district court found that “what the patents are really trying to get at is the transmission of substantially real time data of whether there are any open parking spaces in a given lot.” *Id.* at *21. This was “moving data (open parking spots or not, and maybe where they are) from one place (the parking lot) to another (the driver’s location),” which is an abstract idea. *Id.*

As the *Open Parking* court noted, “[i]nformation about open parking spaces has long been broadcast to drivers who cannot actually see the open spaces.” *Id.* at

1 *22. The court provided two specific examples of this longstanding method of
 2 organizing information: (1) parking garages with exterior displays indicating “if
 3 (and in some cases how many) spots are vacant” and (2) humans designating empty
 4 parking spaces, as “a drive through the streets outside PNC Park on the evening of a
 5 Pirates game reveals any number of people with orange flags waving to cars to
 6 indicate there are vacant spots in their lots.” *Id.* After this analysis, the district
 7 court ruled that the patents were directed to ineligible subject matter and dismissed
 8 the complaint with prejudice. *Id.* at *29. The Federal Circuit found this
 9 determination so straightforward that it issued a summary affirmance. *Open*
 10 *Parking, LLC v. ParkMe, Inc.*, 683 F. App’x 932 (Fed. Cir. 2017) (Rule 36
 11 judgment).

12 *Electric Power Group* is also instructive. The patentee in that case claimed a
 13 method of detecting events on an electric power grid, including receiving data from
 14 a variety of data sources, detecting and analyzing events in real time from analysis
 15 of specific types of data, displaying event analysis results and diagnoses, displaying
 16 visualizations of data streams, and deriving an indicator of power grid vulnerability.
 17 *Elec. Power Grp.*, 830 F.3d at 1351-52. The Federal Circuit found the claims
 18 directed to an abstract idea, holding that “[t]he advance [the claims] purport to
 19 make is a process of gathering and analyzing information of a specified content,
 20 then displaying the results, and not any particular assertedly inventive technology
 21 for performing those functions.” *Id.* at 1354.

22 Claim 1 of the ’956 patent shares the same flaws. Claim 1 purports to cover
 23 gathering information (“detecting, by said imaging unit,” “obtaining . . . a single
 24 high resolution image,” and “extracting from said high resolution image . . . a
 25 permit identifier”); analyzing the information (“assigning . . . an occupied status,”
 26 “deciding whether said occupied status is incorrect,” and “comparing said permit
 27 identifier”); and displaying, or transmitting, the results (“illuminating a first color
 28 of a multicolor indicator,” “displaying a thumbnail image,” and “initiating an

infringement process”). These steps clearly are directed to an abstract idea. *See Elec. Power Grp.*, 830 F.3d at 1354; *see also RecogniCorp LLC v. Nintendo Co.*, 855 F.3d 1322, 1326 (Fed. Cir. 2017) (encoding and decoding image data is abstract). And there is no inventive technology for performing the method, as the ’956 patent specification teaches that the technology used was conventional and already known. (*See supra*, Section II.B.2; ECF No. 23-1 at col. 1:14-24, 7:49-66, 8:30-39, 8:60-63, 11:61-12:4.)

b. Claim 1 covers mental processing and generic computing

The steps of claim 1 are based on processing information through either human mental processes or generic computer processing. The Federal Circuit has “treated analyzing information by steps people go through in their minds, or by mathematical algorithms, without more, as essentially mental processes within the abstract-idea category.” *Elec. Power Grp.*, 830 F.3d at 1354.

First, claim 1 recites information processing that is expressly done within the human mind. A thumbnail image of a parking space is displayed on a graphic user interface (GUI) and a user “decid[es] whether said occupied status is incorrect, based on a visual review of said thumbnail image on said GUI” and “correct[s] said occupied status, by inputting computer-readable instructions to a computer terminal of said GUI” This analysis of information, performed within the user’s mind, is a textbook example of ineligible subject matter. “[C]omputational methods which can be performed entirely in the human mind are the types of methods that embody the ‘basic tools of scientific and technological work’ that are free to all men and reserved exclusively to none.” *Synopsys, Inc. v. Mentor Graphics Corp.*, 839 F.3d 1138, 1146 (Fed. Cir. 2016) (citation omitted). For example, in *RecogniCorp*, the Federal Circuit found that “a method whereby a user displays images on a first display, assigns image codes to the images through an interface using a mathematical formula, and then reproduces the image based on the codes”

1 was an abstract idea. 855 F.3d at 1326. The human mental processing here is
 2 effectively the same.

3 Second, claim 1 recites information processing akin to mental processing, but
 4 based on general computer functions (*e.g.*, “storing at least part of said high
 5 resolution image on a storage device,” and “extracting from said high resolution
 6 image, by digital image processing”). These concepts of data collection,
 7 recognition, and storage, are “undisputedly well-known” and abstract. *Content*
 8 *Extraction & Transmission LLC v. Wells Fargo Bank N.A.*, 776 F.3d 1343, 1347
 9 (Fed. Cir. 2014). That a human mind cannot recognize the “processed streams of
 10 bits” flowing through a computer is irrelevant to the § 101 analysis, because the
 11 basic concept of this activity is abstract. *Id.* (citing *Alice*, 134 S. Ct. at 2356, 2358);
 12 *see also Interval Licensing LLC v. AOL, Inc.*, 896 F.3d 1335, 1345 (Fed. Cir. 2018)
 13 (collection, organization, and display of two sets of information on a generic
 14 display device is abstract absent a specific improvement to the way technologies
 15 operate); *Open Parking*, 2016 U.S. Dist. LEXIS 85260, at *20 (comparing
 16 computerized parking system to human management of a parking lot).

17 Effectively, claim 1 does nothing more than determine whether there is a car
 18 in a parking space, whether the space is properly designated as occupied, and
 19 whether that car has a permit for that space, which humans have done in their
 20 minds, and with pen and paper, for years. *See Open Parking*, 2016 U.S. Dist.
 21 LEXIS 85260, at *22 (noting that at sporting events there are “any number of
 22 people with orange flags waving to cars to indicate there are vacant spots in their
 23 lots”). Such organization of routine human activity is abstract and ineligible for
 24 patenting. *See FairWarning IP, LLC v. Iatric Sys., Inc.*, 839 F.3d 1089, 1095 (Fed.
 25 Cir. 2016) (claim for fraud detection was abstract where it presented the “same
 26 questions . . . that humans in analogous situations detecting fraud have asked for
 27 decades, if not centuries”); *Intellectual Ventures I*, 838 F.3d at 1317-18 (claim to an
 28 email method was abstract where it was similar to operation of a corporate

1 mailroom).

2 **c. Claim 1 does not improve the functioning of the**
 3 **technology itself**

4 Unlike cases in which valid claims were directed to a specific improvement
 5 to the way technologies operate, claim 1 does not purport to “improve the
 6 functioning of the computer itself.” *Alice*, 134 S. Ct. at 2359; *compare Finjan, Inc.*
 7 *v. Blue Coat Sys., Inc.*, 879 F.3d 1299, 1305 (Fed. Cir. 2018) (claim employed a
 8 “new kind of file that enables a computer security system to do things it could not
 9 do before”); *Enfish, LLC v. Microsoft Corp.*, 822 F.3d 1327, 1336 (Fed. Cir. 2016)
 10 (claimed self-referential table was “a specific improvement to the way computers
 11 operate”). Nothing in claim 1 instructs how to build a better imaging device, a
 12 better indicator, a better GUI, a better computer, or a better algorithm. To the
 13 contrary, the ’956 patent specification recognizes that claim 1 could be practiced
 14 using existing algorithms and off-the-shelf computers. (*See supra*, Section II.B.2;
 15 ECF No. 23-1 at col. 1:14-24, 7:49-66, 8:30-39, 8:60-63, 11:61-12:4.)

16 Claim 1 invokes these existing, generic components and algorithms to
 17 implement the abstract idea of processing and displaying information. *See Apple*,
 18 842 F.3d at 1241 (claims were abstract where they did not recite a particular way of
 19 programming or designing the claimed features, only the resulting system). The
 20 claim’s recitation of result-based limitations such as “assigning said parking
 21 space . . . an occupied status,” “displaying a thumbnail image,” and “comparing said
 22 permit identifier” are classic examples of automating information processing with a
 23 computer, which does not does not improve the functioning of the computer itself
 24 and does not confer patentability. *FairWarning*, 839 F.3d at 1095; *Content*
 25 *Aggregation*, 2016 U.S. Dist. LEXIS 166122, at *17 (“generalized steps to be
 26 performed on a computer using conventional computer activity” do not lead to
 27 patentability (quoting *Enfish*, 822 F.3d at 1338)).

28 The claim’s limitations for “illuminating a first color of a multicolor

indicator” and “toggl[ing] said multicolor indicator to illuminate a second color,” which Park Assist added in an express attempt to circumvent § 101 restrictions, are likewise abstract. (Acker Decl. Ex. 1 at 17-18, 21 (5/9/16 Resp. to Office Action).) The Federal Circuit has recognized that such coded transmittal of information is an abstract concept little different than Morse code or “Paul Revere’s ‘one if by land, two if by sea’ signaling system.” *Recognicorp*, 855 F.3d at 1326; *see also Open Parking*, 2016 U.S. Dist. LEXIS 85260, at *22.

At its heart, claim 1 is “is not [for] . . . an *improvement in computers as tools*, but [for] certain independently abstract ideas that *use computers as tools*.” *Credit Acceptance Corp. v. Westlake Servs.*, 859 F.3d 1044, 1055 (Fed. Cir. 2017) (emphasis added) (citation omitted). That is not patentable subject matter.

2. Claim 1 Recites No Inventive Concept

Claim 1 fails *Alice* step two. Reciting the use and arrangement of generic computer components lacks the inventive concept necessary to make the claim “significantly more than a patent upon the ineligible concept itself.” *Credit Acceptance Corp.*, 859 F.3d at 1054 (citation and brackets omitted). As a matter of Supreme Court and Federal Circuit law, and contrary to Park Assist’s arguments during prosecution, tying the claimed method to computerized systems does not transform the claim into a patent-eligible application of the abstract idea.

a. Claim 1 requires nothing more than a generic implementation of an abstract idea

The Supreme Court has twice instructed that “simply implementing a mathematical principle on a physical machine, namely a computer, [i]s not a patentable application of that principle.” *Alice*, 134 S. Ct. 2357-58 (quoting *Mayo*, 566 U.S. at 84). Since those decisions, the Federal Circuit has consistently rejected claims that recite processing information on generic components:

1 The use and arrangement of conventional and generic
 2 computer components recited in the claims—such as a
 3 database, user terminal, and server—do not transform the
 4 claim, as a whole, into “significantly more” than a claim
 5 to the abstract idea itself. We have repeatedly held that
 6 such invocations of computers and networks that are not
 7 even arguably inventive are insufficient to pass the test of
 8 an inventive concept in the application of an abstract
 9 idea.

10 *Credit Acceptance Corp.*, 859 F.3d at 1056 (internal citations and quotations
 11 omitted); *TDE Petroleum Data Sols., Inc. v. AKM Enter., Inc.*, 657 F. App’x 991,
 12 993 (Fed. Cir. 2016) (“[patentee] does not and cannot argue that storing state
 13 values, receiving sensor data, validating sensor data, or determining a state based on
 14 sensor data is individually inventive.”).

15 Here it is clear, both from the claim and from the specification, that claim 1
 16 just requires already-available electronics, with their already-available basic
 17 functions, to use as tools in executing the claimed processes. *See SAP Am., Inc. v.*
 18 *InvestPic, LLC*, 898 F.3d 1161, 1169-70 (Fed. Cir. 2018). The specification’s
 19 recitation of processors, RAM, and other commonplace electronics does not amount
 20 to anything more than “generic computer implementation.” *P&G Co. v.*
 21 *Quantificare, Inc.*, 288 F. Supp. 3d 1002, 1027 (N.D. Cal. 2017); (Section II.B.2;
 22 ECF No. 23-1 at col. 1:14-24, 7:49-66, 8:26-59, 8:60-63, 11:61-12:4). The
 23 software recited in the specification is similarly generic: “[a]ny classification
 24 routine or machine learning algorithm can be used” and the permit identifier is
 25 extracted with “digital image processing.” (ECF No. 23-1 at col. 11:61-62, Claim
 26 1.) The specification concedes that using such technologies to determine
 27 occupancy of slots and provide guidance to available spaces was already known in
 28 the art. (*Id.* at col. 1:8-22.)

 Moreover, claim 1 itself is far more general than even the patent
 specification. Limitations and teachings that appear in the specification, but not in

1 the claim, cannot provide inventive steps for a § 101 analysis. *Two-Way Media Ltd*
 2 *v. Comcast Cable Commc'ns, LLC*, 874 F.3d 1329, 1339 (Fed. Cir. 2017) (“While
 3 the specification may describe a purported innovative ‘scalable architecture,’
 4 claim 1 of the ’187 patent does not.”); *Return Mail, Inc. v. USPS*, 868 F.3d 1350,
 5 1369 (Fed. Cir. 2017) (limitations in specification that “do not appear in the subject
 6 claims” did not save claims), *cert. granted on other grounds*, 2018 U.S. LEXIS
 7 6261 (Oct. 26, 2018); *RecogniCorp*, 855 F.3d at 1327 (“[A]n inventive concept
 8 must be evident in the claims.”). Thus, specific teachings in the specification about,
 9 for example, the appearance of a GUI interface or the benefits of claims that were
 10 abandoned in prosecution cannot save the abstract concept of claim 1.

11 Fundamentally, claim 1’s use of computer technology is merely for “physical
 12 components [that] behave exactly as expected according to their ordinary use,”
 13 which does not transform an abstract concept into patentable subject matter. *TLI*
 14 *Commc'ns*, 823 F.3d 615; *Open Parking*, 2016 U.S. Dist. LEXIS 85260, at *27
 15 (incorporating computer technology “does not ‘override[] the routine and
 16 conventional sequence of events’ pertaining to finding a parking space”).

17 **b. Park Assist’s arguments during prosecution**
 18 **were wrong as a matter of law**

19 During prosecution of the ’956 patent, Park Assist argued that its claims were
 20 patentable under § 101 because (1) they recite “images captured by an imaging
 21 device,” (2) they recite “at least a processor or controller for controlling the
 22 illumination of multicolor indicator [sic], and thus, tying a machine to a process
 23 recitation,” and (3) they are tied “to machines and processes that can only be
 24 performed by computerized systems.” (Acker Decl. Ex. 1 at 7 (8/3/2015 Resp. to
 25 Office Action); *id.* at 21 (5/9/2016 Resp. to Office Action).) None of these
 26 arguments pass muster under § 101.

27 First, merely reciting “images captured by an imaging device” does not
 28 satisfy § 101. *See Content Extraction*, 776 F.3d at 1347 (claims reciting a

1 “scanner” were invalid under § 101); *TLI Commc’ns*, 823 F.3d at 613 (“[T]he
 2 claims’ recitation of . . . an ‘image analysis unit,’ and a ‘control unit’ fail to add an
 3 inventive concept.”); *P&G Co.*, 288 F. Supp. 3d at 1026-27 (acquiring and
 4 analyzing a digital image “are routine computer functions”).

5 Second, reciting a processor or controller to “t[ie] a machine to a process
 6 recitation” does not satisfy § 101. *See FairWarning*, 839 F.3d at 1096 (the use of
 7 elements like a microprocessor or user interface does not alone transform an
 8 otherwise abstract concept); *Cybersource Corp. v. Retail Decisions, Inc.*, 654 F.3d
 9 1366, 1375 (Fed. Cir. 2011) (“[T]he basic character of a process claim drawn to an
 10 abstract idea is not changed by claiming only its performance by computers”). In
 11 fact, the Supreme Court in *Alice* expressly rejected the strategy employed by Park
 12 Assist during prosecution. The Court acknowledged that “a computer is a tangible
 13 system (in § 101 terms, a ‘machine’),” but “if that were the end of the § 101
 14 inquiry, an applicant could claim any principle of the physical or social sciences by
 15 reciting a computer system configured to implement the relevant concept.” *Alice*,
 16 134 S. Ct. at 2359. Permitting patent eligibility “to depend simply on the
 17 draftsman’s art” would “eviscerat[e] the rule that . . . abstract ideas are not
 18 patentable.” *Id.* (citations omitted).

19 Third, tying the claims “to machines and processes that can only be
 20 performed by computerized systems” does not satisfy § 101, nor does claim 1
 21 actually do so. In *Content Extraction*, the plaintiff argued that its claims passed
 22 § 101 because they required a scanner, and “human minds are unable to process and
 23 recognize the stream of bits output by a scanner.” 776 F.3d at 1347. The Federal
 24 Circuit rejected this argument, pointing out that “the claims in *Alice* also required a
 25 computer that processed streams of bits, but nonetheless were found to be abstract.”
 26 *Id.*; *see also Open Parking*, 2016 U.S. Dist. LEXIS 85260, at *26 (rejecting § 101
 27 argument that claim could only be performed with computer). Moreover, the
 28 inquiry is not whether a human mind has the same technological operation as the

1 recited machine (which would never be the case), but whether the fundamental
 2 process is akin to mental or algorithmic activity. *See, e.g., Return Mail*, 868 F.3d at
 3 1368 (invalidating claim to computerized mail encoding and decoding that merely
 4 recited processes performed in the human mind, “with the benefit of generic
 5 computer technology”). All the processes in claim 1—determining whether a
 6 vehicle is in a parking space, indicating space occupancy, reading a permit on a
 7 vehicle, comparing the permit to a list of approved permits, and taking action if the
 8 permit is not approved—“can, and have been, performed in the human mind,”
 9 individually and in combination. *Id.*

10 Finally, to the extent that Park Assist’s prosecution arguments were an
 11 attempt to invoke the “machine-or-transformation” test, that would still not save
 12 claim 1. The Federal Circuit articulated the machine-or-transformation test in
 13 *Bilski*: a claimed process is patent eligible if it is tied to a particular machine or
 14 transforms an article into a different state or thing. *In re Bilski*, 545 F.3d 943, 954
 15 (Fed. Cir. 2008), *abrogated in pertinent part*, 561 U.S. at 604. But the Supreme
 16 Court made clear in *Bilski*, *Mayo*, and *Alice* that satisfying the machine-or-
 17 transformation test no longer saves claims from § 101 rejections. As the Federal
 18 Circuit explained, while the machine-or-transformation test remains an important
 19 clue in the patentability inquiry,

20 in *Mayo*, the Supreme Court emphasized that satisfying
 21 the machine-or-transformation test, *by itself, is not*
 22 *sufficient to render a claim patent-eligible* as not all
 23 transformations or machine implementations infuse an
 24 otherwise ineligible claim with an “inventive
 25 concept.” . . . And after *Alice*, there can remain no doubt:
 26 recitation of generic computer limitations *does not make*
an otherwise ineligible claim patent-eligible. The bare
 fact that a computer exists in the physical rather than
 purely conceptual realm “is beside the point.”

27 *DDR Holdings*, 773 F.3d at 1256 (emphasis added) (quoting *Mayo*, 566 U.S. at 85;
 28

1 *Alice*, 134 S. Ct. at 2358). For example, “[m]erely stating that the methods at issue
 2 are performed on already existing vehicle equipment, without more, does not save
 3 the disputed claims from abstraction.” *Vehicle Intelligence & Safety LLC v.*
 4 *Mercedes-Benz USA*, 635 F. App’x 914, 919 (Fed. Cir. 2015); *see also Open*
 5 *Parking*, 2016 U.S. Dist. LEXIS 85260, at *26-27 (“Just because the abstract ideas
 6 in these patents are to be carried out on some mobile device (even a brand spanking
 7 new one in 1999), does not save them from having to pass through the *Alice*
 8 sieve.”).

9 **B. Dependent Claim 2 of the ’956 Patent Is Ineligible**
 10 **Under § 101**

11 **1. Claim 2 Is Directed to an Abstract Idea**

12 Claim 2 depends from claim 1 and thus shares the same defects under § 101.
 13 Claim 2 narrows claim 1 by requiring the system to execute machine-readable code
 14 to modify a classification algorithm in response to the occupancy status correction
 15 recited in claim 1. (ECF No. 23-1, Claim 2) Far from saving the claims, this
 16 additional limitation confirms that both claims 1 and 2 are directed to the abstract
 17 idea of processing information.

18 Algorithms are abstract concepts. In *Alice*, the Supreme Court noted
 19 long-standing precedent under which an algorithm carried out on a general purpose
 20 computer “was an abstract idea.” 134 S. Ct. at 2357. The Federal Circuit has
 21 repeatedly applied this rule to find algorithms are abstract ideas. *See Elec. Power*
 22 *Grp.*, 830 F.3d at 1353 (analyzing information by mathematical algorithms, without
 23 more, is an abstract idea); *Digitech Image Techs., LLC v. Elecs. for Imaging, Inc.*,
 24 758 F.3d 1344, 1351 (Fed. Cir. 2014) (“a process that employs mathematical
 25 algorithms to manipulate existing information to generate additional information” is
 26 an abstract idea); *RecogniCorp*, 855 F.3d at 1327 (a “process that started with data,
 27 added an algorithm, and ended with a new form of data was directed to an abstract
 28 idea”).

1 Here, claim 2 does not purport to improve the algorithm or the computer that
 2 runs it. The specification teaches a generic “classification routine or machine
 3 learning algorithm” that runs on generic computer equipment. (ECF No. 23-1 at
 4 col. 11:61-62.) A claim that recites the use of an algorithmic engine that is “not
 5 claimed, identified, or explained . . . is the height of abstraction.” *Clarilogic, Inc. v.*
 6 *FormFree Holdings Corp.*, 681 F. App’x 950, 954 (Fed. Cir. 2017).

7 **2. Claim 2 Recites No Inventive Concept**

8 Claim 2 lacks anything “significantly more” than the abstract concept of
 9 training a generally-known algorithm. The specification confirms that such
 10 computer processing is not an independently inventive concept. (ECF No. 23-1 at
 11 col. 5:67-6:3 (“Preferably, the image classification system uses a self-modifying
 12 classification algorithm, i.e., an algorithm that can be trained to improve the
 13 classification accuracy thereof.”).) As the specification makes clear, “[a]ny
 14 classification routine or machine learning algorithm can be used; some common
 15 algorithms in the literature include Classification and Regression Trees, Support
 16 Vector Machines, and Artificial Neural Networks.” (*Id.* at col. 11:61-64.) Nothing
 17 in either the claim or the specification teaches how to code the classification
 18 algorithm, or claims that the ’956 patent is improving the algorithm itself.
 19 Moreover, claiming particular methods of computing information “simply
 20 provide[s] further narrowing of what are still mathematical operations” and does
 21 not provide an inventive step. *SAP Am.*, 898 F.3d at 1169 (rejecting claim to using
 22 an algorithm to analyze data).

23 //

24 //

25 //

26 //

27 //

28

1 **V. CONCLUSION**

2 The claims of the '956 patent fall squarely within the exceptions to
3 patentable subject matter articulated in *Mayo/Alice* and their progeny. The Court
4 should find the claims ineligible for patenting and dismiss Park Assist's Amended
5 Complaint with prejudice.

DETAILED ACTION

The present application is being examined under the pre-AIA first to invent provisions.

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03/26/2015 has been entered.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-9, 19, 20, 25 and 26 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter because the claim(s) as a whole, considering all claim elements both individually and in combination, do not amount to significantly more than an abstract idea. The claim(s) is/are directed to a method of organizing human activities including the mere instructions for a human to implement the claimed idea on a computer. The additional element(s) or combination of elements in the claim(s) other than the abstract idea per se amount(s) to no more than: mere instructions to implement the idea on a computer. Viewed as a whole, these additional claim element(s) do not provide meaningful limitation(s) to transform the abstract idea into a patent eligible application of the abstract idea such that the claim(s)

Application/Control Number: 13/697,380

Page 3

Art Unit: 2482

amounts to significantly more than the abstract idea itself. Therefore, the claim(s) are rejected under 35 U.S.C. 101 as being directed to non-statutory subject matter.

Response to Arguments

Claims 1-29 are pending and are presented for examination. Claims 1, 10, 19 and 29 have been amended. Claim 29 has been added. No new matter was added.

Applicant argues that the prior art does not disclose the features of claims 1, 10 and 29. The Applicant has amended claims 1, 10 and 29 to include (1) that the same camera that takes the first image also takes the second image and (2) that an alternate vehicle is displayed to a user.

The Examiner has read and understands the Applicants arguments. However, the Examiner respectfully disagrees. Chew US Publication No. 2009/0309760, figure 1 illustrates that that the same imaging device is used to capture one or more images of an occupied parking spot (paragraph 0008). Chew paragraph 0010 further discloses displaying more than one vehicle at a time.

Applicant's arguments with respect to claims 19-24 have been considered but are moot because the arguments do not apply to any of the references being used in the current rejection. Claims 19-24 are now rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over Lee US Publication No. 2008/0258935 in further view of King et al., US Publication 2009/0192950.

Applicant's arguments with respect to claims 25-28 have been considered but are moot because the arguments do not apply to any of the references being used in the current rejection. Claims 25-28 are now rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over Lee US Publication No. 2008/0258935 in further view of Sreenan et al., US Publication 2010/0302933.

AMENDMENT AND RESPONSE TO SECOND NON-FINAL OFFICE ACTION

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Madam:

This paper is submitted in response to the Non-Final Office Action mailed May 1, 2015.

Please amend the patent application as follows.

Amendments to the Claims begin on page 2 of this paper.

Remarks/Arguments begin on page 11 of this paper.

Throughout this paper references are made to the numbered paragraphs from U.S. Patent Application Publication No. US 2013/0113936 A1, which is the corresponding U.S. Patent Application Publication to the instant patent application.

1 of 19

Amendment and Response to second Non-Final Office Action dated May 1, 2015
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

REMARKS

Reconsideration in view of the foregoing amendments and the following remarks is respectfully requested. Moreover, the applicants have reviewed the Non-Final Office Action of May 1, 2015 (the Office Action), and submit that this paper is responsive to all points raised therein.

I. Status of the Claims

Claims 1-29 are pending and are presented for examination.

Claim 30 is newly added.

No claims have been amended.

Support for new claim 30 can be found, for example, in the Specification at Paragraphs [0126] and [0055] and claim 1.

II. Rejections Under 35 USC § 101

Claim 1-9, 19, 20, 25 and 26 were rejected under 35 USC § 101 as pertaining to non-statutory matter as relating to mere instructions to implement an abstract idea on a computer. The Examiner's rejection is traversed.

It appears that a clerical error has occurred as none of the above-mentioned claims refer merely to instructions implemented by a computer. All of the claims include, at the very least, images captured by an imaging device – thereby tying the invention to a machine.

As such, reconsideration of the rejection under 35 USC § 101 is respectfully requested.

III. Rejections Under 35 USC § 103(a)

Claims 1-18 and 29

11 of 19

Amendment and Response to second Non-Final Office Action dated May 1, 2015
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

Claims 1-18 and 29 were rejected under 35 USC § 103(a) as obvious by Chew (U.S. Patent Application Publication No. US 2009/0309760 – hereinafter Chew), in view of Falk (U.S. Patent Application Publication No. US 2009/0315738 – hereinafter Falk).

Independent claim 1, as previously presented, recites features including: “obtaining at least one high-resolution occupancy and identity image, only for each parking space having an occupied status” and “displaying at least a part of at least one alternative said occupancy and identity image of an alternative vehicle from which to select said vehicle”.

Chew discloses obtaining multiple images for all lots, whether occupied or vacant – but no deferential between high and low resolution and, specifically, no feature for *only* obtaining high resolution images for occupied spaces. Moreover, Chew shows no interest in obtaining both high and low resolution images, as the system of Chew only captures one type of image, repeatedly, at predefined time-intervals. Chew processes all images equally, thereby expending considerable resources even when the image is of a vacant parking space. See for example Paragraph [0035] of Chew where vacant lots and occupied lots are equally monitored and analyzed.

On page 3 of the Office Action Examiner states as follows:

The Applicant has amended claims 1, 10 and 29 to include (1) that the same camera that takes the first image also takes the second image and (2) that an alternate vehicle is displayed to a user.

Applicants respectfully wish to note that Examiner has failed to acknowledge a third amendment, namely “obtaining at least one high-resolution occupancy and identity image... only for each parking space having an occupied status”.

Applicants amended the claims and argued, in the previous communication, that the same imaging device captures two different **types** of images. Independent claim 1 was previously amended to specify that a high resolution image is obtained *only* for occupied parking spaces.

12 of 19

Amendment and Response to second Non-Final Office Action dated May 1, 2015
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

The Commissioner for Patents is hereby authorized to treat any concurrent or future reply, requiring a petition for extension of time under 37 CFR 1.136 for its timely submission, as incorporating a petition for extension of time for the appropriate length of time if not submitted with the reply.

Respectfully submitted,

Art Unit: 2482

DETAILED ACTION

The present application is being examined under the pre-AIA first to invent provisions.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/11/2016 has been entered.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-28 and 30-32 are rejected under 35 U.S.C. 101 because the claimed invention is directed to a judicial exception (i.e., a law of nature, a natural phenomenon, or an abstract idea) without significantly more. Claim(s) 1-28 and 30-32 is/are directed to comparing and organizing information (i.e., the steps of obtaining, comparing, determining, generating, and correcting) for transmission, which is similar to concepts that have been identified as abstract by the courts, such as using categories to organize, store and transmit information in *Cyberfone* or comparing new and stored information and using rules to identify options in *SmartGene*.

Application/Control Number: 13/697,380

Page 3

Art Unit: 2482

The claim(s) does/do not include additional elements that are sufficient to amount to significantly more than the judicial exception because the additional elements when considered both individually and as a combination do not amount to significantly more than the abstract idea. The claim recites the additional elements of obtaining images (claim 1, etc.), determining occupancy based on images (claim 1, etc.), changing and correcting statuses (claim 19). These functions may be interpreted as being a method performed by a person. The claims do not amount to significantly more than the abstract idea. Therefore, the claim is not patent eligible.

Response to Arguments

Applicant's arguments filed 12/03/2015 have been fully considered but they are not persuasive.

The Examiner has read and understands the Applicants arguments. However, the Examiner respectfully disagrees.

The prior art (Chew US 2009/0309760) does not differ with regards to the following features:

1. (Applicants Argument) The prior art does not disclose: The system and method include a two-step process: first, ascertain whether the space is occupied or vacant; and second, obtain identifying images.

(Examiner Response)Chew discloses obtaining images of parking spaces and determining if the space is vacant or occupied (Chew paragraph 0004). Chew further discloses processing one or more images of the car park spaces to provide information regarding the locations and

Application/Control Number: 13/697,380

Page 4

Art Unit: 2482

numbers of empty and occupied car park spaces and processing one or more images of the vehicles occupying car park spaces, to identify one or more of their features [paragraph 0011]. If the space were determined to be empty, there would be no need to take more images.

2. (Applicants Argument) The prior art does not disclose: The monitoring stage uses low resolution images (this is implicit from the fact that the identification image is high resolution), for example 320x240 or 640x480 still images and the identification stage uses high resolution images, for example 2592x1944 still images. The low resolution translates to small memory size for each image - making the system viable. The low resolution is sufficient to determine occupancy and vacancy. A high resolution image is needed for identification purposes, e.g. extracting the license plate number or model of the car etc. The same camera is used for both types of images.

(Examiners Response)The Examiner uses the broadest reasonable interpretation. High resolution and low resolution are not defined or limited to (320x240 or 640x480 or 2592x1944) in the Applicants claims or disclosure. Based on the Examiners interpretation Chew suggests obtaining a high resolution image. Chew discloses obtaining at least one image of a vehicle using digital cameras (figure 1 item 105) capable of identifying license plates in the captured images. Based on the Examiners broadest reasonable interpretation of "high resolution", Chews disclosed camera system captures high resolution images.

For further clarification claim 1 is now rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over Chew US Publication No. 2009/0309760 in view of Konno US Publication No. 2008/0151051.

Application/Control Number: 13/697,380

AMENDMENT AND RESPONSE TO NON- FINAL OFFICE ACTION

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Madam:

This paper is submitted in response to the Non-Final Office Action mailed February 9, 2016.

Please amend the patent application as follows.

Amendments to the Claims begin on page 2 of this paper.

Remarks/Arguments begin on page 15 of this paper.

Throughout this paper references are made to the numbered paragraphs from U.S. Patent Application Publication No. US 2013/0113936 A1, which is the corresponding U.S. Patent Application Publication to the instant patent application.

1 of 22

Amendment and Response to Non-Final Office Action mailed February 9, 2016
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

vehicle, wherein said system controller is configured to compare said identifier with each said vehicle identifier digitally stored in said storage device so as to identify a location of said parking space of said vehicle based on a known location of said imaging device that obtained said high resolution identity image from which said vehicle identifier was digitally extracted.

15. (Currently Amended) The system of claim 14, wherein said information terminal includes a display mechanism for digitally displaying instructions that direct said customer from said information terminal to said parking space of said vehicle.

16. (Currently Amended) The system of claim ~~14~~10, wherein ~~said information terminal includes an input mechanism that is used by said customer to input said identifier of said vehicle~~ wherein said plurality of devices are selected from the group including differentially controlled lighting fixtures and ventilation systems.

17. (Currently Amended) The system of claim ~~14~~14, wherein ~~said further comprising a gateway terminal that issues said a receipt including a representation of said identifier before said customer parks said vehicle in said one parking space.~~

18. (Currently Amended) The system of claim ~~14~~17, wherein said gateway terminal includes an identification camera for acquiring an identification image of said vehicle, wherein said identifier is digitally extracted from said identification image, by digital image processing.

19. (Currently Amended) A method of managing a plurality of parking spaces, comprising:

- (a) monitoring a parking space with an imaging device of an imaging unit;
- (b) detecting, by said imaging unit, occupancy of said parking space;

6 of 22

Response and Amendment responsive to Non-Final Office Action mailed February 9, 2016
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

- (c) assigning said parking space, in which said occupancy was detected, an occupied status, wherein said occupied status is indicated by illuminating a first color of a multicolor indicator collocated with said imaging device, said first color predefined to determine said occupied status;
- (d) obtaining, as a result of said parking space having said occupied status, a single high resolution image of a vehicle occupying said parking space, said high resolution image obtained by said imaging device;
- (e) storing at least part of said high resolution image on a storage device;
- (f) displaying a thumbnail image of said parking space on a graphic user interface (GUI), said thumbnail image digitally processed from an image electronically communicated to said GUI from said imaging unit;
- (g) deciding whether said occupied status is incorrect, based on a visual review of said thumbnail image on said GUI; and
- (h) correcting said occupied status, by inputting computer-readable instructions to a computer terminal of said GUI, if said parking space shown in said thumbnail image is vacant and said computer terminal electronically communicating a command to toggle said multicolor indicator to illuminate a second color, said second color predefined to indicate a vacant status;
 - (i) extracting from said high resolution image, by digital image processing, a permit identifier for said vehicle and comparing said permit identifier with at least one parking permit identification stored on said storage to determine a permit status of said parked vehicle; and
 - (j) initiating an infringement process for said vehicle having said permit identifier that fails to coincide with at least one of said at least one parking permit identification.

20. (Previously Presented) The method of claim 19, wherein said detecting includes providing machine-readable code of a self-modifying classification algorithm for assigning said respective statuses, the method further comprising:

7 of 22

Response and Amendment responsive to Non-Final Office Action mailed February 9, 2016
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

- (e) said system executing said machine-readable code to modify said classification algorithm in response to said correcting.

21. (Currently Amended) A system for managing a plurality of parking spaces, comprising:

- (a) at least one camera for acquiring a respective occupancy image of each parking space;
- (b) at least one multicolor indicator collocated with a respective camera for indicating an occupancy status of at least one parking space imaged by said camera;
- (bc) a display device for displaying at least a portion of said occupancy images;
- (ed) a memory for storing program code for:
 - (i) assigning each said occupancy image a respective status selected from the group consisting of vacant and occupied wherein each said status is indicated by a different color of said multicolor indicator predefined to indicate said status,
 - (ii) illuminating said predefined color of said multicolor indicator according to said status, and
 - (iii) displaying said occupancy images on said display device along with said respective assigned statuses thereof;
- (de) a processor for executing said program code; and
- (ef) an input device for correcting said respective assigned statuses as displayed on said display device, wherein said at least one camera, said display device, said memory, said at least one multicolor indicator and said input device are in electronic communication with said processor.

22. (Original) The system of claim 21, wherein said program code implements a self-modifying classification algorithm for assigning said respective statuses.

Docket No.: 4962/2

REMARKS

Reconsideration in view of the foregoing amendments and the following remarks is respectfully requested. Moreover, the applicants have reviewed the Non-Final Office Action of February 9, 2016 (the Office Action), and submit that this paper is responsive to all points raised therein.

I. Status of the Claims

Claims 1-6, 8 and 10-32 are pending and are presented for examination.

Claims 1, 3-5, 10-19, 21, 23, 25, 27, 28 and 30 have been amended.

Claims 2 and 8 have been canceled. As such, claims 1, 3-6 and 10-32 are currently pending prosecution.

Support for amendments to independent claims 1, 10, 19, 21, 23, 25, 27 and 30, regarding multicolor indicators, can be found in the Specification, for example, at Paragraph [0049].

Support for other amendments to independent claims 1 and 30, can be found in the Specification, for example, at Paragraph [0130] and in the support for previously presented claims 2 and 3, 14.

Support for other amendments to claims 10 can be found in the Specification, for example, at Paragraph [0134] and in the support for previously presented claim 3.

Support for the amendments to claim 14 is found, for example, in originally filed claim 15 and Fig. 6.

Support for other amendments to claim 19 can be found in the Specification, for example, at Paragraph [0132].

II. Rejections Under 35 USC § 101

Claims 1-28 and 30-32 were rejected under 35 USC § 101 as directed to non-statutory subject matter.

15 of 22

Response and Amendment responsive to Non-Final Office Action mailed February 9, 2016
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

Independent claims 1, 10, 19, 21, 23, 25, 27 and 30 have been amended to the feature of “wherein each said status is indicated by illuminating a different color of a multicolor indicator collocated with said imaging device, said illuminated color predefined to indicate said status” or similar feature. The claims, as amended now recite at least a processor or controller for controlling the illumination of multicolor indicator, and thus, tying a machine to a process recitation. Claims 1, 3-5, 10-19, 21, 23, 25, 27, 28 and 30 have been amended, in addition, to recite to recite additional features tying the claims to machines and processes that can only be performed by computerized systems.

Since amended independent claims 1, 10, 19, 21, 23, 25, 27 and 30 each recite statutory subject matter under 35 USC § 101, claims 3-5, 11-18, 20, 22, 24, 26, 28-29 and 31-32, dependent therefrom, also recite statutory subject matter under 35 USC § 101, for at least the same reasons.

Claims 1, 3-6 and 10-32 as presently presented all recite statutory subject matter under 35 USC § 101. Accordingly, withdrawal of this rejection is respectfully requested.

III. Rejections Under 35 USC § 103(a)

Claims 1-3, 6-18 and 29 (and 31-32)

Claims 1-3, 6-18 and 29 (and 31-32) were rejected under 35 USC § 103(a) as obvious by Chew, in view of Konno.

Claims 2 and 7-9 are canceled, rendering the rejection of those claims moot.

Claims 1-3, 6-18 and 29 (and 31-32) have been discussed in prior responses. Those discussions are applicable here.

Nonetheless and without concession, independent claims 1 and 10 have been amended to disclose features including: “wherein each said status is indicated by illuminating a different color of a multicolor indicator collocated with said imaging device, said illuminated color predefined to indicate said status”.

Docket No.: 4962/2

Claim 1

In addition, claim 1 has been amended to include features of “in response to an electronic request for a parking fee made at an information terminal... comparing said user identifier to said vehicle identifier... identifying a location of said parking space... returning, at said information terminal, said parking fee calculated at least in part according to a differential tariff based on said location of said parking space of said vehicle occupying said parking space.” (Emphasis added)

Claim 10

Claim 10 has been amended to include features of “a plurality of devices per environmental aspect for controlling said environmental aspect, wherein said system controller uses said plurality of devices to control at least one environmental aspect at least in part based on occupancy levels calculated according to said low resolution images.”

Neither Chew nor Konno discloses a multicolor occupancy status indicator collocated with the imaging device etc.. Furthermore neither Chew nor Konno discloses a parking fee calculated at least in part according to a differential tariff based on the location of the parking space as recited in claim 1. Still further, neither Chew nor Konno disclose devices for controlling environmental aspects based on occupancy levels of the parking spaces.

As such, both Chew and Konno, alone or in combination, fail to show, teach or suggest any processes or structure for, “a multicolor indicator collocated with said imaging device” and/or “a differential tariff based on said location” as recited in amended independent claim 1 and “a plurality of devices per environmental aspect for controlling said environmental aspect... based on occupancy levels calculated according to said low resolution images.”

Docket No.: 4962/2

Based on the above, this combination of Chew and Konno fails to meet all of the recitations of amended independent claims 1 and 10, such that it fall short of claims 1 and 10. For at least this reason, Chew and Konno, in any combination, fail to render claims 1 or 10 obvious under 35 USC § 103(a).

Since the combination of Chew and Konno fails to render amended independent claim 1 obvious under 35 USC § 103(a) for the reasons presented above, claims 3, 6-9, 11-18 and 29 (and 31-32) dependent from claims 1 and 10, are also not rendered obvious by the aforementioned combination, for at least the same reasons. Claims 3, 6-9, 11-18 and 29, 31-32 further distinguish the invention over the cited art.

Claims 4 and 5

Claims 4 and 5 were rejected under 35 USC § 103(a) as obvious by Chew, in view of Konno and Falk.

Claims 4 and 5 depend from claim 1, discussed above. That discussion is relevant here. As claim 1 is allowable, claims 4 and 5, dependent there-from are likewise allowable for at least the same reasons.

For at least this reason, Chew, Konno and Falk, in any combination, fail to render claims 4 or 5 obvious under 35 USC § 103(a).

Claims 19-24

Claims 19-24 were rejected under 35 USC § 103(a) as obvious by Lee, in view of King. Claims 19-24 have been discussed in prior responses.

Those discussions are applicable here.

Nonetheless and without concession, independent claims 19, 21 and 23 have been amended to disclose features including: "wherein each said status is indicated by illuminating a different color of a multicolor indicator collocated with said imaging device, said illuminated color predefined to indicate said status".

18 of 22

Response and Amendment responsive to Non-Final Office Action mailed February 9, 2016
U.S. Patent Application Serial No.: 13/697,380

Docket No.: 4962/2

Claim 19 has been further amended to include features of “extracting... a permit identifier for said vehicle and comparing... with... parking permit identification stored... to determine a permit status of said parked vehicle;” and “initiating an infringement process for said vehicle having said permit identifier that fails to coincide with at least one of said at least one parking permit identification.” (Emphasis added)

Neither Lee nor King discloses a multicolor occupancy status indicator collocated with the imaging device etc.

Furthermore neither Lee nor King discloses extracting and comparing a parking permit identifier to stored permit ID and/or initiating infringement process for a vehicle without a proper permit, as recited in claim 19.

As such, both Lee and King, alone or in combination, fail to show, teach or suggest any processes or structure for, “a multicolor indicator collocated with said imaging device” as recited in amended independent claims 19, 21 and 23.

Further both Lee and King, alone or in combination, fail to show, teach or suggest any processes or structure for, “ extracting ... a permit identifier ... and comparing... with... parking permit identification ... to determine a permit status...” and “initiating an infringement process for said vehicle having said permit identifier that fails coincide with at least one of said at least one parking permit identification” as recited in claim 19.

Based on the above, this combination of Lee and King fails to meet all of the recitations of amended independent claims 19, 21 and 23, such that it fall short of claims 19, 21 and 23. For at least this reason, Lee and King, in any combination, fail to render claims 19, 21 and 23 obvious under 35 USC § 103(a).

Since the combination of Chew and Konno fails to render amended independent claims 19, 21 and 23 obvious under 35 USC § 103(a) for the reasons presented above, claims 20, 22 and 24 dependent from claims 19, 21 and 23, are also not rendered obvious

Docket No.: 4962/2

by the aforementioned combination, for at least the same reasons. Claims 20, 22 and 24 further distinguish the invention over the cited art.

Claims 25-28

Claims 25-28 were rejected under 35 USC § 103(a) as obvious by Lee, in view of Sreenan.

As above, claims 25-28 have been discussed in prior responses. Those discussions are applicable here. Also as above, independent claims 25 and 27 have been amended in a similar manner to claims 21 and 23. Sreenan adds nothing to Lee so that claims 25-27 are all allowable for at least the same reasons discussed above for claims 21 and 23.

Claim 28 has been discussed previously. That discussion is relevant here.

Claim 30

Claim 30 was rejected under 35 USC § 103(a) as obvious by Lee in view of Konno, further in view of Chew.

Claim 30 has been amended in a similar manner to claim 1. The entire discussion above is relevant here. Lee adds nothing to Konno and Chew, in view of the amendments, and therefore claim 30 is allowable for at least the same reasons discussed above for claim 1.

IV. Conclusion

Should the Examiner have any question or comment as to the form, content, or entry of this paper, the Examiner is requested to contact the undersigned at the email address below. Similarly, if there are any further issues yet to be resolved to advance the prosecution of this application to issue, the Examiner is requested to email the undersigned counsel.

Allowance of all pending claims, 1, 3-6 and 10-32, is respectfully requested.

The applicants believe that there are not any other fees currently due. Although, should any fees be due, these fees may be charged to Deposit Account No. 06-2140.

During the pendency of this application, the Commissioner for Patents is hereby authorized to charge payment of any fees necessary for the prosecution of this patent

DETAILED ACTION

Notice of Pre-AIA or AIA Status

The present application is being examined under the pre-AIA first to invent provisions.

Claim Rejections - 35 USC § 101

The claims 1-28 and 30-32 were previously rejected under 35 USC § 101. The rejection of claims 1-28 and 30-32 under 35 USC § 101 is withdrawn since, the Applicant has appropriately amended the claims.

Response to Arguments

Applicant's arguments filed 05/09/2016 have been fully considered but they are not persuasive.

Applicant's arguments filed 05/09/2016 have been fully considered but they are not persuasive.

The prior art (Chew US 2009/0309760) does not differ with regards to the following features:

The Applicant argues that the prior art does not disclose the following:

(1) wherein each said status is indicated by illuminating a different color of a multicolor indicator collocated with said imaging device, said illuminated color predefined to indicate the status

The Examiner has read and understands the Applicants arguments. However, the Examiner respectfully disagrees. Lee (2008/0258935) discloses the claimed features. Lee

Application/Control Number: 13/697,380

Page 3

Art Unit: 2482

discloses a display which admits red, orange and yellow (Lee, Figure 5c and paragraph 0053) lights to indicate the occupancy status of a vehicle.

Secondly, the Applicant argues that the prior art does not disclose the following:

(2) said parking fee calculated at least in part according to a differential tariff based on said location of said parking space of said vehicle occupying said parking space

The Examiner has read and understands the Applicants arguments. However, the Examiner respectfully disagrees. Lee (2008/0258935) discloses the claimed features. Lee discloses a settlement fee (claimed tariff) for vehicles parked in the parking lot (claimed, parking space location), (Lee, Figure 7 and paragraph 0068).

The Applicant argues that the prior art does not disclose the following:

(3) plurality of devises to control at least one environmental aspect at least in part based on occupancy levels calculated according to said low resolution images

The Examiner has read and understands the Applicants arguments. However, the Examiner respectfully disagrees. Lee (2008/0258935) discloses the claimed features. Lee discloses emitting lights such as green or white lights in the parking lot (claimed, environmental aspect) to represent spaces available for parking [paragraph 0045]).

Claim Rejections - 35 USC § 103

1. In the event the determination of the status of the application as subject to AIA 35 U.S.C. 102 and 103 (or as subject to pre-AIA 35 U.S.C. 102 and 103) is incorrect, any correction of the

Claim 30 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over Lee US Publication No. 2008/0258935 in view of Konno US Publication No. 2008/0151051 and Chew US Publication No. 20090309760.

Regarding claim 30 (Currently Amended), Lee discloses the following claim limitations:

A method for managing a parking space, the method comprising:

- (a) detecting a vehicle entering the parking space with an imaging unit (**Lee, paragraph 0008 and 0061**);
- (b) sending a notification from a processor of said imaging unit to a system processor indicating that the parking space is occupied (**Figure 7, “Update parking information”**);
- (c) toggleing colors of a multicolor indicator from a first color indicating that the parking space is vacant to a second color indicating that the parking space is occupied, said multicolor indicator collocated with the parking space (**Lee discloses a display which admits red orange and yellow [Lee, Figure 5c and paragraph 0053] lights to indicate the occupancy status of a vehicle**);
- (d) sending a request from said system processor to said imaging unit processor to capture a high resolution image of said vehicle in the parking space (**Lee, Figure 2 illustrates inner parking lot cameras (300, 102, 103 etc.,) positioned for capturing images of vehicles in parking spaces**);
- (e) obtaining said high-resolution image of said vehicle using said imaging device (**Lee, The inner parking lot cameras are used to identify the vehicles [paragraph 0043]**);
- (f) extracting an identifier from said high-resolution image (**Lee, paragraph 0043**); and
- (g) in response to an inquiry, by said customer, that includes said identifier:
 - (i) identifying the parking space in which said vehicle is parked, at least in part by comparing said identifier to said high-definition image (**Lee, figure 1 “Parking Guidance System”**);
 - (ii) displaying at least a part of said high-definition image (**figure 5c**)
 - (iii) displaying at least a part of at least one alternative high-definition image of an alternative vehicle from which to select said vehicle (**Lee, figure 5c**)

Application/Control Number: 13/697,380

Page 18

Art Unit: 2482

(iv) receiving and electronically inputted selection of said vehicle (Figure 7, photographing vehicles getting out of parking lot),

(v) charging a parking fee calculated according to a differential tariff based on a location of said parking space of said selected vehicle (Figure Settlement of parking fee)

(ivi) digitally displaying a guidance aid on a digital display so as to direct said customer to the parking space of said vehicle selected by said customer (Lee discloses displaying a parking path [paragraph 0011])

Lee does not explicitly disclose the image of “high resolution”. However, Konno discloses a capturing high resolution images by a monitoring camera.

Lee and Konno are in the same field of endeavor. Both inventions relate to vehicle monitoring via video surveillance. One with ordinary skill in the art would know that Lee may be modified to include that the images are “high resolution images”, as disclosed by Konno. High resolution images are used in situations where identifying data, such as a license plate number, must be extracted from an image (Konno, paragraph 00061). All of the elements in the claim were known and could be combined by known techniques, it would have been obvious to one of ordinary skill to combine the teachings to produce a predictable result.

Allowable Subject Matter

Claims 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Application/Control Number: 13/697,380

Page 19

Art Unit: 2482

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DEIRDRE BEASLEY whose telephone number is (571)270-3677. The examiner can normally be reached on Monday - Friday 8:00AM - 5:00PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on (571)272-7331. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
